

1. **Anatomy means** which of the following?

- A. Study of structure of the body
- B. Study of relations of different parts of the body
- C. Study function of the body
- D. Study structure, function and relations of different parts of the body

ANSWER: D

2. Which of the following does not describe the **anatomical position**?

- A. Body is erect
- B. Arms are adducted
- C. Palms of the hands are facing backwards
- D. Legs are close to each other

ANSWER: C

3. **Abduction of a limb** is the **movement** in which of the followings?

- A. Median sagittal plane
- B. Horizontal plane
- C. Parasagittal plane
- D. Coronal plane

ANSWER: D

4. Which of the following does not describe the **anatomical position**?

- A. The body is standing erect
- B. Arms are adducted
- C. Palms of the hands are facing medially
- D. Face is directed forwards

ANSWER: C

5. Which of the following does not describe the **movement's terminology**?

- A. Coronal plane is an imaginary vertical line at right angle to the median plane

B. Rotation is term applied to movement of a part of the body around its long axis

C. Inversion is a movement results in the sole facing laterally

D. Circumduction is summation of movements

ANSWER: C

6. Following are true except which?

A. Flexion movement of a limb takes place in the sagittal plane.

B. Abduction movement of a limb takes place in the horizontal plane.

C. Supination is a lateral rotation of the forearm.

D. Protraction is a movement of the temporomandibular joint.

ANSWER: B

7. Which of the following is a term of position and relation?

A. Sagittal

B. Coronal

C. Transverse

D. Proximal

ANSWER: D

8. Which of the following provides summary of the four types of body planes?

A. Two are vertical, one is horizontal, and one is any odd angle.

B. Two are horizontal, one is vertical, and one is any odd angle.

C. All planes are horizontal.

D. All planes are vertical.

ANSWER: A

9. A vertical plane, dividing the body into unequal left and right parts is

A. Horizontal

B. Median

C. Parasagittal

D. Coronal

ANSWER: C

10. Frontal planes are also called which of the following?

A. Coronal.

B. Axial.

C. Horizontal.

D. Oblique.

ANSWER: A

11. Transverse planes can also be called which of the following?

A. Horizontal.

B. Coronal.

C. Longitudinal.

D. Oblique.

ANSWER: A

12. A patient who is supine is lying ...

A. On his back

B. Face down

C. On the left side

D. On the right side

ANSWER: A

13. The term proximal is best described as which of the following?

A. Closer to the joint or extremity

B. Further away from a joint or extremity

C. Closer to the trunk of the body

- D. Farther away from the trunk of the body

ANSWER: C

14. Plantar refers to the.....

- A. Palm of the hand
- B. Bottom of the foot
- C. Forehead
- D. Buttocks

ANSWER: B

15. Prone refers to a patient lying on which of the following?

- A. Their back, face up
- B. Their anterior body surface
- C. On their right side
- D. On their left side

ANSWER: B

16. The term bilateral refers to which of the following?

- A. Spleen
- B. One side
- C. Frontal skull
- D. Both sides

ANSWER: D

17. The "anatomical" position is best described as a person...

- A. Standing, facing forward, palms forward
- B. Lying on their back, palms facing down
- C. Standing facing sideways, palms facing thighs
- D. Lying on their stomach, palms up

ANSWER: A

18. An imaginary line down the centre of the body that passes between the eyes and extends down through the navel is the.....

- A. Plane
- B. Midline
- C. Outline
- D. Quadrant

ANSWER: B

19. The term that refers to a position closer to midline is which of the following?

- A. Medial
- B. Lateral
- C. Posterior
- D. Anterior

ANSWER: A

20. The opposite to anterior is called which of the following?

- A. Posterior
- B. Superior
- C. Exterior
- D. Proximal

ANSWER: A

21. Which of the following is correct about what happens during flexion?

- A. The angle between bones is increased.
- B. The angle between bones is decreased.
- C. The bone moves away from the body.
- D. The bone moves toward the centre of the body.

ANSWER: B

22. Which of the following terms would be used in the name of a **muscle** that **moves** the leg **away from the body**?

- A. flexor
- B. Adductor
- C. Extensor
- D. Abductor**

ANSWER: D

23 The **vessels** are part of which of the following **systems**?

- A. Cardiovascular.**
- B. Respiratory.
- C. Renal.
- D. Genital.

ANSWER: A

24. The **normal organization** is which of the following?

- A. Tissue, cell, system, organ.
- B. System, cell, tissue, organ.
- C. Cell, tissue, organ, system.**
- D. Organ, cell, tissue, system.

ANSWER: C

25. **Ventral means** which of the following?

- A. Anterior.**
- B. Posterior.
- C. Superior.
- D. Inferior.

ANSWER: A

1. What is the main component of the superficial fascia?

- A. Adipose tissue
- B. Muscular tissue
- C. Nervous tissue
- D. Epithelial tissue

ANSWER: A

2. Which of the following sites of superficial fascia has adipose tissue?

- A. Eyelids
- B. Anterior abdominal wall
- C. Penis
- D. Scrotum

ANSWER: B

3. The muscle of the wall of the heart is called which of the following?

- A. Smooth
- B. Cardiac
- C. Skeletal voluntary
- D. Skeletal involuntary

ANSWER: B

4. The muscles of the walls of the blood vessels are called which of the following?

- A. Smooth
- B. Cardiac
- C. Skeletal voluntary
- D. Skeletal involuntary

ANSWER: A

5. The muscles of the walls of the digestive system is called which of the following?

- A. Smooth
- B. Cardiac
- C. Skeletal voluntary
- D. Skeletal involuntary

ANSWER: A

6. The muscles of the limbs are called which of the following?

- A. Smooth
- B. Cardiac
- C. Skeletal voluntary
- D. Skeletal involuntary

ANSWER: C

7. The muscle of the wall of the diaphragm is called which of the following?

- A. Smooth
- B. Cardiac
- C. Skeletal voluntary

D. Skeletal involuntary

ANSWER: D

8. Which of the following is a skin appendage?

A. Pituitary gland

B. Thyroid gland

C. Thymus gland

D. Sebaceous gland

ANSWER: D

9. Which of the followings sites of superficial fascia has adipose tissue?

A. Eyelids

B. Gluteal region

C. Penis

D. Scrotum

ANSWER: B

10. What is the function of superficial fascia?

A. Depot for food storage

B. Gives origin to muscles

C. Contains melanin pigments

D. Forms sheath around neurovascular bundle

ANSWER: A

11. Which of the following is a site of skin having sweat glands?

A. Palm of the hand

B. Nail beds

C. Glans penis

D. Clitoris

ANSWER: A

12. Which of the following is a site of skin having sweat glands?

A. Sole of the foot

B. Red margin of the lips

C. Glans penis

D. Clitoris

ANSWER: A

13. Which of the following is a skin appendage?

A. Pituitary gland

B. Thyroid gland

C. Thymus gland

D. Sweat gland

ANSWER: D

14. Which is moved the least during muscle contraction?

- A. Origin
- B. Insertion
- C. Ligaments
- D. Joints

ANSWER: A

15. Which is moved the most during muscle contraction?

- A. Origin
- B. Insertion
- C. Ligaments
- D. Joints

ANSWER: B

16. What is the second envelope of the body?

- A. Skin
- B. Fascia
- C. Bone
- D. Muscles

ANSWER: B

17. Which of the following is not a variety of deep fascia?

- A. Fascia lata
- B. Clavipectoral fascia
- C. Intermuscular septa
- D. Superficial fascia

ANSWER: D

18. Which of the following is the superficial fascia?

- A. Retinacula
- B. Clavipectoral fascia
- C. Fibrofatty fascia
- D. Intermuscular septa

ANSWER: C

19. What are the two types of fascia?

- A. Medial and lateral
- B. Superficial and deep
- C. Proximal and distal
- D. External and internal

ANSWER: B

20. What is the function of deep fascia?

- A. Depot for food storage
- B. Acts as a distribution layer in which blood vessels, lymph vessels and nerves can travel
- C. Contains melanin pigments

D. Forms sheath around neurovascular bundle

ANSWER: D

21. What is the function of the epidermis?

A. Depot for food storage

B. Acts as a distribution layer in which blood vessels, lymph vessels and nerves can travel

C. Contains melanin pigments

D. Forms sheath around neurovascular bundle

ANSWER: C

22. Which of the following is an organ of the lymphatic system?

A. Sweat glands

B. Thymus glands

C. Nails

D. Mammary glands

ANSWER: B

23. Which one of the following is the sheetlike tendon of a muscle?

A. Unipennate

B. Parallel

C. Aponeurosis

D. Strap

ANSWER: C

24. Which one of the following is an arrangement of muscle fibers?

A. Tendon

B. Fusiform

C. Aponeurosis

D. Raphe

ANSWER: C

25. Which of the following is the fleshy part of a muscle?

A. Belly

B. Tendon

C. Origin

D. Insertion

ANSWER: C

26. Which of the following is the feathery shaped muscle fibers arrangement?

A. Pennate

B. Triangular

C. Strap

D. Quadrata

ANSWER: A

27. Which of the following is the weight per cent of the skeletal muscles?

- A. 30
- B. 40**
- C. 20
- D. 10

ANSWER: B

28. Which of the following is the number of the skeletal muscles in the body?

- A. 620**
- B. 520
- C. 420
- D. 720

ANSWER: A

29. Which of the following is the nerve supply of the smooth muscles?

- A. Motor somatic
- B. Sensory somatic
- C. Somatic and sympathetic
- D. Autonomic**

ANSWER: D

30. Which of the following is the nerve supply of the skeletal muscles?

- A. Motor somatic
- B. Sensory somatic
- C. Somatic and sympathetic**
- D. Autonomic

ANSWER: C

31. Which of the following describes the superficial fascia?

- A. May determine the path taken by pathogenic organisms
- B. Helps holding the structures together
- C. Mixture of loose areolar and adipose tissues**
- D. Membranous layer of connective tissue

ANSWER: C

32. Which of the following is a site of skin having hairs?

- A. Sides of the feet
- B. Glans penis
- C. Clitoris
- D. External surface of the labia majora**

ANSWER: D

33. Which of the following does not describe the skin?

- A. Skin creases are thinner at their sites than elsewhere

- B. Lines of Langer are not visible to the naked eye
- D. Friction ridges form the fingerprints
- D. Sweat glands, the least deeply penetrating structure of all epidermal appendages

ANSWER: D

34. Which of the following does not describe skeletal muscle action?

- A. Prime mover is a chief muscle responsible for particular movement
- B. Antagonist opposes the action of prime mover
- C. Fixator contracts isometrically
- D. Synergist relaxes to prevent unwanted movement

ANSWER: D

35. Which of the following describes the smooth muscles?

- A. Controlled by will
- B. Under control of somatic nervous system
- C. Attached to bones
- D. They contract and relax in ring fashion

ANSWER: D

1. What is the type of paranasal sinuses?

- A. Long bones
- B. Irregular bones
- C. Short bones
- D. Pneumatic bones

ANSWER: D

2. What is the type of patella?

- A. Long bones
- B. Sesamoid bones
- C. Short bones
- D. Irregular bones

ANSWER: B

3. What is the type of sutures of the skull?

- A. Fibrous joint
- B. Primary cartilaginous joint
- C. Secondary cartilaginous joint
- D. Synovial joint

ANSWER: A

4. What is the type of shoulder joint?

- A. Synovial joint ball and socket variety
- B. Fibrous joint
- C. Synovial joint ellipsoid variety
- D. Secondary cartilaginous joint

ANSWER: A

5. Which of the following is an example of bones classification according to shape?

- A. Femur (long)

- B. Tarsal bones (flat)
- C. Scapula (short)
- D. Patella (pneumatic)

ANSWER: A

6. Which of the following is an example of bones classification according to shape?

- A. Femur (flat)
- B. Tarsal bones (short)
- C. Scapula (long)
- D. Patella (pneumatic)

ANSWER: B

7. Which of the following is a fibrous joint?

- A. Shoulder joint
- B. Gomphosis
- C. Symphysis pubis
- D. Epiphyseal plate of long bone

ANSWER: B

8. Which of the following is a secondary cartilaginous joint?

- A. Shoulder joint
- B. Gomphosis
- C. Symphysis pubis
- D. Epiphyseal plate of long bone

ANSWER: C

9. Which of the following is a primary cartilaginous joint?

- A. Shoulder joint
- B. Gomphosis
- C. Symphysis pubis

D. Epiphyseal plate of long bone

ANSWER: D

10. Which of the following is a synovial joint, uniaxial variety?

A. Hip joint

B. Elbow joint

C. Wrist joint

D. Sutures of the skull

ANSWER: B

11. Which of the following is a synovial joint, biaxial variety?

A. Hip joint

B. Elbow joint

C. Wrist joint

D. Sutures of the skull

ANSWER: C

12. Which of the following is a synovial joint, polyaxial variety?

A. Hip joint

B. Elbow joint

C. Wrist joint

D. Sutures of the skull

ANSWER: A

13. Which of the following is a synovial joint, ball and socket variety?

A. Hip joint

B. Elbow joint

C. Wrist joint

D. Intercarpal joints

ANSWER: A

14. Which of the following is a synovial joint, hinge variety?

- A. Hip joint
- B. Elbow joint
- C. Wrist joint
- D. Intercarpal joints

ANSWER: B

15. Which of the following is a synovial joint, ellipsoid variety?

- A. Hip joint
- B. Elbow joint
- C. Wrist joint
- D. Intercarpal joints

ANSWER: C

16. Which of the following is a synovial joint, plane variety?

- A. Hip joint
- B. Elbow joint
- C. Wrist joint
- D. Intercarpal joints

ANSWER: D

17. Which of the following is a synovial joint, pivot variety?

- A. Hip joint
- B. Elbow joint
- C. Wrist joint
- D. Superior radioulnar joint

ANSWER: A

18. Which of the following is a synovial joint, saddle-shaped variety?

- A. Hip joint
- B. Elbow joint
- C. Wrist joint

D. Carpometacarpal joint of the thumb

ANSWER: D

19. Which of the following are pneumatic bones?

- A. Temporal
- B. Occipital
- C. Mandible
- D. Maxilla**

ANSWER: D

20. Which of the following are pneumatic bones?

- A. Temporal
- B. Occipital
- C. Mandible
- D. Frontal**

ANSWER: D

21. Which of the following are pneumatic bones?

- A. Temporal
- B. Occipital
- C. Mandible
- D. Sphenoid**

ANSWER: D

22. Which of the following are pneumatic bones?

- A. Temporal
- B. Occipital
- C. Mandible
- D. Ethmoid**

ANSWER: D

23. Which of the following are short bones?

A. Scaphoid

B. Occipital

C. Mandible

D. Maxilla

ANSWER: A

24. Which of the following are short bones?

A. Calcaneus

B. Occipital

C. Mandible

D. Maxilla

ANSWER: A

25. How many bones are present in the human body?

A. 206

B. 106

C. 306

D. 620

ANSWER: A

26. How many carpal bones are present in each hand of the human body?

A. 14

B. 5

C. 8

D. 7

ANSWER: C

27. How many tarsal bones are present in each foot of the human body?

A. 14

B. 5

C. 8

D. 7

ANSWER: D

28. How many metacarpal bones are present in each hand of the human body?

A. 14

B. 5

C. 8

D. 7

ANSWER: B

29. How many phalangeal bones are present in each hand of the human body?

A. 14

B. 5

C. 8

D. 7

ANSWER: A

30. Which of the following is a secondary cartilaginous joint?

A. Shoulder

B. Elbow

C. Hip

D. Manubrio-sternal joint

ANSWER: D

31. A linear elevation on the surface of a bone is called which of the following?

A. Tuberosity

B. Crest

C. Head

D. Condyle

ANSWER: B

32. Which of the following does not describe the bones?

- A. Long bones are found in the limbs
- B. Articular surfaces of short bones are covered by hyaline cartilage
- C. Epiglottis is an example of bone surface marking
- D. Bone is solid living tissue

ANSWER: C

33. Which of the following does not describe the cartilage?

- A. Hyaline cartilage forms articular cartilage of synovial joints
- B. Hyaline cartilage is capable of repair when fractured
- C. Elastic cartilage is found in the external ear
- D. Fibrocartilage is intervertebral discs

ANSWER: B

34. Stability of joints does not depend on which of the following?

- A. Shape of articular surfaces
- B. Ligaments
- C. Muscles around
- D. Synovial membrane

ANSWER: D

35. Which of the following does not describe the joints?

- A. Joint means a site where two or more bones meet
- B. Union between epiphysis and diaphysis is a primary cartilaginous joint
- C. Synovial joints are stable because they have no joint cavities
- D. Fibrous joints, the two bones are connected together by fibrous tissues

ANSWER: C

36. Which of the following does not describe the bones?

- A. Bones cannot change its structure in response to stress
- B. Atlantoaxial joint is a pivot synovial
- C. Sesamoid bones are found in certain tendons

D. Spine and styloid processes are sharp elevations on the bone

ANSWER: A

37. Which of the following bones is a flat type of bone?

A. Tibia

B. Humerus

C. Vertebrae

D. Vault of the skull

ANSWER: D

38. Which of the following is a hyaline cartilage?

A. Manubrio-sternal joint

B. Inter-vertebral disc

C. Articular cartilage of synovial joint

D. Symphysis pubis

ANSWER: C

39. Which of following is an irregular type of bone?

A. Patella

B. Scapula

C. Radius

D. Hip

ANSWER: D

40. Which of the following is not a function of bones?

A. Production of red blood cells.

B. Protect solid internal organs.

C. Give areas for muscular attachment.

D. Stores for calcium salt to time to need.

ANSWER: B
